ACKNOWLEDGEMENTS

The team would like to thank a number of people and organizations that have contributed to the creation of this report, including:

John P. Bohenko, City Manager

Staff of the:
- Planning Department
- Economic Development Department
- Department of Public Works
- Community Development Department

Wayfinding Advisory Group Members:
- Ben Anderson, Prescott Park Arts Festival
- Jonathan Brown, Strawbery Banke
- Maryellen Burke, Portsmouth Historical Society
- Joshua Cyr, Alpha Loft and Portsmouth Economic Development Commission
- Elisa Winter Holber, Winter Holben Design and 3S Artspace Board of Directors
- Jane James, ReMax by the Bay
- John Moynihan, Prescott Park Arts Festival
- Valerie Rochon, Greater Portsmouth Chamber of Commerce
- Kathleen Soldati, The Music Hall

Consultant and Project Manager:
MERJE Design and Juliet T. H. Walker, City of Portsmouth Transportation Planner

3.2 Strategies
3.3 Strategies
3.4 Strategies
In January of 2013, the City of Portsmouth contracted with MERJE to develop a comprehensive wayfinding plan that considers all forms of communication tools, including digital technology, maps and signage. The intent of the program is to reduce visual clutter and present a uniform and consistent system of elements that will guide visitors to various Portsmouth destinations.

The City of Portsmouth has established an open process for this project, through meetings with City staff, consultation with the Wayfinding Advisory Group, approving agencies, stakeholder interviews, and public input presentations. MERJE’s task was to sort through the issues uncovered and to responsibly and respectfully integrate them into the analysis based on the firm’s knowledge of wayfinding best practices, human factors, and design principles. We thank all the individuals who took the time and energy to share their ideas and perceptions with us. We deeply appreciate their participation, knowledge and enthusiasm.

Cities, towns and communities of all sizes and aspirations understand that the reality of today’s economy and the high level of competition for the public’s attention demand a clear and distinctive identity. Wayfinding programs promote a city’s identity, make it easier for visitors to find their way and enhance the visitor’s experience. Through this wayfinding project the City of Portsmouth understands that communicating a consistent identity and message across a variety of design elements and technologies is a key factor in reaching cultural, economic and marketing goals.

Numerous plans and studies developed for the City have referenced the need for a wayfinding system. In addition, the business community, visitor sites, and cultural organizations and residents have all expressed a need for wayfinding that can both help travelers navigate efficiently to destinations and amenities (such as parking), as well as increase site visibility and help attract new visitors.

Despite Portsmouth’s regional accessibility, the historical development patterns of the City create challenges for navigating Portsmouth. The City’s compact downtown and complex local street network offer challenges to those new or unfamiliar to the community. Giving verbal directions can be a difficult task, based on the circuitous route one may have to take, even for a destination that may not be too far away.
WAYFINDING PRINCIPLES

1. The system is intended for first-time visitors and residents alike.
2. First impressions and perception play an active role in determining the best route of travel.
3. The best route may not be the shortest or quickest.
4. Terminology must be kept short and easily understood.
5. Direct to the “front door” of a destination.
6. Departure routes are equally as important as arrival routes.
7. Promote economic development and the assets of the City of Portsmouth by making connections between destinations.
8. The system is for the entire City.

VISION

• The design shall be unique to this place and fit into the context of Portsmouth.
• The wayfinding program shall help create a positive first impression of Portsmouth that the city is organized, safe and caring.
• The program shall assist in marketing the City and help people discover the hidden jewels that make Portsmouth a unique destination.
• Identify ways that wayfinding can enhance and reflect the distinctive and creative character of the City.
• Utilize a variety of wayfinding tools.

GOALS

• Involve the public, local stakeholders and approving agencies throughout the process.
• Reduce sign clutter.
• Establish a level of consistency across all forms of communication and set standards for colors, patterns, graphics and terminology that will aid visitors.
• Assist the City in being a more accessible and easier to navigate place.

The City’s wayfinding program shall provide consistent and attractive information to assist the traveling public to navigate efficiently to key destinations within the City. To achieve this, the planning process has identified the following vision, goals, and principles.

The City’s wayfinding program shall provide consistent and attractive information to assist the traveling public to navigate efficiently to key destinations within the City. To achieve this, the planning process has identified the following vision, goals, and principles.

OBJECTIVES & PHILOSOPHY
SECTION 1: WAYFINDING TOOLS
An effective wayfinding program can reinforce a sense of place and promote the City of Portsmouth as an environment that is easy to navigate. The program will provide first-time and frequent visitors, as well as residents with clear and consistent information. Elements will reflect the Portsmouth culture and attitude as an active, energetic and exciting place to be. This Portsmouth Wayfinding Analysis considers a variety of wayfinding tools: landscaping, lighting, street furniture, landmarks, gateway elements, signage, mapping, banners and public art, as well as related issues such as sustainability and integration of technology.

This analysis has been organized in the following manner.

- **PRE-ARRIVAL TECHNOLOGY**
  This is the information a person investigates prior to beginning their journey. It is also the first opportunity to present an identity for the system and encourage exploration.

- **PLACE TECHNOLOGY**
  Upon arrival these are touch points to engage the visitor. By presenting a variety of devices and interactive opportunities, the user can receive and explore information.

- **SUPPORT INFORMATION**
  A series of visual, physical and verbal tools can support a wayfinding system. This communicates a single voice and identity for the system.

- **SIGNAGE**
  Signage is the most visible element of a wayfinding system. All levels of signage must be considered to create a seamless journey.

- **ENVIRONMENTS & SPACES**
  As we travel through a city there are physical cues that help guide us. Downtown Portsmouth, through its original plan, naturally provides many of these cues.
In addition to traditional mailed promotions, printed brochures and advertisements, there are a variety of technology tools that help us plan our trip. Each of these elements can be seamlessly tied together through the use of consistent information and the graphics and identity.

**WAYFINDING WEB SITE AND INTERACTIVE MAP**

In addition to the standard City website, there can be either a stand-alone or internal link to a wayfinding map. The wayfinding map can appear on the City website and/or the Chamber of Commerce website. Alternately, the information can be presented as a separate site to be managed and hosted either by the City or a local tourism partner.

A wayfinding interactive map allows for a more extensive inclusion of attractions and businesses into the overall wayfinding program. The accessibility and ease of an online map broadens the level of inclusion and helps to supplement physical wayfinding components.

**Create a wayfinding-focused web portal that explains the wayfinding system and provides a [Google-powered] interactive map. The map will allow visitors to get point-to-point directions.**

Links to local hotels, attractions and recreational facilities are commonly included. The interactive map should allow users to click on a destination and receive directions. It is common practice for this map to be built on Google Maps and to use the power of the Google search engine to provide descriptive information as well as point-to-point directions to the destination.

The look and feel of the interactive map should reflect the overall identity of the City wayfinding program.
SMA

The smart phone app would be a map-based location service for a variety of categories, including things to do, events, hotels, attractions, shopping, restaurants, college campuses, hiking trails, bicycle paths, parking lots, services, emergency points and any other point of interest (POI) in or near the City of Portsmouth. It would also allow visitors to view/use other information about a POI, like a website or phone number.

FEATURES
• Map-based location services with GPS.
• Allows users to find attractions, restaurants, parking lots and other services within the City of Portsmouth.
• Local businesses share the best deals in town in real time to make sure visitors get the best prices during their stay.
• Locals and visitors alike utilize the events calendar and live entertainment schedules.
• Available in multiple languages.

The integration of technology into the wayfinding program will support the City’s innovative character. The incorporation of these devices and applications is now expected by tourists and residents alike. These wayfinding tools are a part of everyone’s daily routine.

END-USER TECHNOLOGY
This is the utilization of technology where information is communicated to users through the visitor’s device (smartphone, iPad or computer). This concept does not require the City to invest in hardware or infrastructure. The only investment is in development and ongoing maintenance. End-user technologies include the following:

TEXT MESSAGE MAPS
Static orientation maps (at bus shelters, kiosks, or on signs) that include a “text message number”. When keyed in, the user receives a return text message with information about the destination. This can be a short message about events, hours of operation, or the best place to park. This can be accomplished through a partnership with local telecommunications providers.

SMART PHONE APP
The smart phone app would be a map-based location service for a variety of categories, including things to do, events, hotels, attractions, shopping, restaurants, college campuses, hiking trails, bicycle paths, parking lots, services, emergency points and any other point of interest (POI) in or near the City of Portsmouth. It would also allow, visitors to view/use other information about a POI, like a website or phone number.

FEATURES
• Map-based location services with GPS.
• Allows users to find attractions, restaurants, parking lots and other services within the City of Portsmouth.
• Local businesses share the best deals in town in real time to make sure visitors get the best prices during their stay.
• Locals and visitors alike utilize the events calendar and live entertainment schedules.
• Available in multiple languages.

Consider teaming with sponsors to develop a private/public partnership that would allow for the creation of parking, transportation and tourism mobile apps and text messaging integrated programs.
News from ABC’s Times Square building comes via a curving, nine-ribbon electronic billboard with ticker-style headlines and live broadcasts, via a curving, nine-ribbon electronic billboard.

The Comcast Experience Video Wall is the largest four-millimeter LED screen in the world. Spanning 83.3 feet wide by 25.4 feet high, the 2,100 square-foot video wall brings spectacular original programming to visitors 18 hours a day.

QR codes for different aspects of Portsmouth. These could be used on kiosks, brochures, interpretive panels, and maps, or as stickers for shopping bags, posters, etc.

Chamber of Commerce Visitor Map Brochure

**QR Codes**

QR Codes help visitors connect to specific information through scanning technology. Visitors scan codes using a free app on their mobile phones, and are promptly directed to online information about Portsmouth events, parking, dining or shopping.

Portsmouth is currently using QR codes in marketing materials, but we would like to see this tool used in other ways as well. Parking garages, pedestrian kiosks and interpretive panels are all places where QR codes can provide useful and engaging information for to make a visitor’s experience easier and more complete.

**Features:**

- Brochures, maps, posters, billboards, point-of-sale – the range of places where one can use a QR Code is almost infinite.
- Simple, intuitive and interactive, the QR Code enables immediate response and deeper engagement from visitors, providing a unique vehicle to influence in-the-moment behavior, and turn interest into action.
- With built-in tracking, metrics and analysis tools, QR Codes give cities access to data that can help them make effective decisions about their marketing expenditures.

**Potential Locations for Stand-Alone Elements**

- Visitor Center
- Discover Portsmouth Center
- Market Square
- Districts/Parks
- Waterfront
- Parking Garage and Lots

**QR Codes are dynamic technology that let cities change campaigns at any time, enabling cities to react and evolve in real-time and deliver the most powerful outcomes.**

**Stand-Alone Elements**

These elements can vary from beacons of technology that are multifunctional to simple interactive touchscreens positioned in various visitor centered locations.

**Interactive Screens, Kiosks & Maps:** There are a multitude of products that can be utilized. This becomes a extension of the City website.

**UrbanFlow Kiosk:** This particular product expands the idea of an interactive kiosk to include not only wayfinding information, but also local services, statistical data and citizen responsiveness information, making city data and local information totally transparent.

**Technology / Media Element:** The creation of a landmark element (wall or pylon) that can provide real-time information, news, event promotion, attraction videos and digital posters will help to establish a unique visual statement, as well as tourism information. The communication of this type of information may encourage people to stay longer and visit additional destinations. Typically located in an entertainment or retail district - this element may be considered in both interior and exterior conditions.

Identify places where QR codes can incorporate parking information, COAST and Wildcat Transit routes, shopping and special event information. This should include kiosks, interpretive panels, maps, and at transit stops.
Landmarks are used everyday to provide direction; it can be as simple as “Make a left at the North Church” or as common as “Meet me at the Post Office”.

In addition to providing directions, landmarks are also helpful for establishing a person’s orientation, especially in an exterior environment, where architectural features, landscaping and physical elements help to position us in unfamiliar territory.

The City of Portsmouth offers many landmark features, including: iconic elements like the North Church Steeple, or Memorial Bridge; unique areas like Market Square or Strawbery Banke Museum; historic neighborhoods and cemeteries; as well as Prescott Park, “The Decks”, and distinct landscapes like the South and North Mill Ponds and the Portsmouth Plains.

Creating a set of icons to identify some of the larger landmarks in Portsmouth, such as the North Church steeple, “The Decks”, Strawbery Banke Museum, and the Discover Portsmouth Center, will be helpful on maps for at-a-glance information. It will also benefit international visitors in the city.

Consider identifying locations for landmark murals on the sides of buildings. These murals can tell a story, promote public art, and capture the character of the city.
Create a standard Tourism App for Portsmouth that will be used across many wayfinding tools.

As more Tourism Apps are created, have QR codes displayed at hotels and all Visitor Centers and kiosks to download the Apps.

Whether information is communicated through technology, printed advertisements or a friendly face at a hotel, each element effects the experience of a visitor and offers the opportunity to communicate a consistent message, graphic language and helpful customer service.

**TOOLS**

**WELCOME BROCHURE & ORIENTATION MAP**

This traditional piece of communication can be used either as a pre-arrival tool or an on-site arrival promotion of the City. Simple and clear it provides the basic information about the city. The map helps the visitor to establish a cognitive map of the city layout prior to arriving. Only the highest level of destination and visitor information shall appear in this brochure. The design will reflect the overall wayfinding program through its use of color, pattern and identity.

**PUBLIC TRANSPORTATION**

COAST provides year round public bus and trolley service in the Seacoast New Hampshire region. The Portsmouth Trolleys have two routes, 40 and 41, providing service through Downtown Portsmouth, connecting the Newington Shopping Malls, Pease Tradeport, Transportation Center, Lafayette Road, and other jobs, retail and housing stops in the City.

Seasoned trolley service within the downtown also operates during the summer and on weekends in December.

The Wildcat Transit & Campus Connector provides a loop-route from the University of New Hampshire to Downtown Portsmouth, and shares a couple of key stops with COAST, including Woodbury Ave and Market Square.

**HOTEL STAFF TRAINING**

In communities where the economy is driven by tourism and overnight stays, it is common practice to host Hotel Staff Training programs once or twice a year. The current training provided by the Chamber of Commerce should continue to be a part of the educational process each year. This will provide the opportunity for tourism professionals to come in and discuss issues and topics that can improve customer service and help enhance the visitor’s experience by making the city more friendly, welcoming and accessible.

Once the new wayfinding program is implemented, there are two forms of training that can be conducted related to the wayfinding program. The first is a simple brochure or hand-out that educates the hotel staff about the wayfinding program, provides a list of common terminology, explains the wayfinding philosophy and offers the preferred routes visitors should use. This can also be extended to shop owners, transportation workers, and government agencies.

The second step is providing staff with a set of wayfinding tools, such as: pre-printed directions from their hotel to the most popular areas; or printed brochure/orientation map; or a card that lists web sites.

The design team can assist with any of the wayfinding sessions or staff training, and there are a number of tourism companies that cover a variety of tourism training topics.
As you travel around Portsmouth, you cannot help but notice there are plenty of signs. What Portsmouth does not have, is a “sign system”. A comprehensive sign program provides a consistent and organized approach to presenting information and directing people to their destinations in a sequential and efficient manner.

It is important to note, the intent of the Portsmouth Wayfinding Program, is NOT TO ADD to the signs that are currently in place, but to replace existing signs with a system that is coordinated and planned.

The sign system also helps to establish a unique identity through its use of colors, typefaces, patterns and other graphic and physical elements. It is important that the design be of its place and fit into the context of Portsmouth and its environment. Each element is designed for both its functional purpose as well as the conditions of its placement. Scale, legibility, daytime vs. evening conditions, accessibility and engineering requirements are all considered.

Planned wayfinding and signage systems also have the ability to be inclusive to a variety of local attractions and destinations. This is particularly important for the secondary destinations, as these destinations may rely on signs to build the public awareness of their location. Signs give validation that a destination is worth visiting, providing an opportunity for Portsmouth to promote its assets.

The sign drawings and photographs provided at left illustrate a successful sign system installed in the city of Frederick, Maryland.
VEHICULAR

Highway & Primary Gateway
Identifies arrival to the City and incorporates the identity. One sign located at each primary gateway into the City limits.

Downtown Gateway
Identifies arrival to the Downtown and incorporates the identity.

Vehicular Directionals
Directs to City attractions.

- Maximum 3 listings per sign
- Maximum 2 lines per attraction
- Goal: 1 sign per city block

Parking Trailblazer
Directs to public parking areas.

Parking Identification
Identifies public parking lots.

Destination Arrival
Marks arrival to a destination.

PEDESTRIAN

Pedestrian Directional
Directs to destinations within pedestrian zones. Located at intersections and/or street corners.

Information Kiosks
Located at key gathering points. Includes logo, maps, brochures, directions and other visitor information.

Interpretive Signage
Provides a graphic and written narrative on historical context, data and interesting facts regarding a site or destination.

Trail Signage
Identifies trails and directs to destinations within pedestrian zones. Located along trails and at intersections and/or street corners.
Creating connections between major destinations, parks and other attractions has the potential to:

- Increase visibility of the City of Portsmouth amenities
- Boost attendance for smaller destinations
- Increase repeat visitation to the City and major destinations

Wayfinding programs provide an opportunity to connect districts, destinations, and people. Whether the connections are intentionally provided by related attractions, a common visitor activity that links destinations, or passing encounter while exploring – these can be a powerful marketing tool, and an important wayfinding tool.

Promoting connections can encourage visitors to stay longer to fully experience the City. This connection strategy helps to improve the overall experience of a visitor, promoting a positive image, favorable word-of-mouth and social media effect. Ultimately, this can lead to return visits and increased over-night stays.

The diagram to the left provides a graphic hierarchy of some of the connections that have been identified in consultation with stakeholders. This information will help identify and reinforce routes between individual attractions and identify opportunities to promote destinations, activities and events through various graphic and electronic tools.
SECTION 2: WAYFINDING & SIGNAGE ANALYSIS
The primary focus at these locations will be to coordinate terminology to create consistent messaging and provide a seamless journey for visitors as they transition from highway systems to the City of Portsmouth wayfinding program.

A gateway is a variety of elements which can be used to welcome visitors to the City of Portsmouth. These can include architectural elements, public art, lighting, landscaping, as well as signage.

Vehicular directional wayfinding elements located at parking facilities will direct to major parking facilities and major attractions.

Wayfinding elements at this scale will be provided to indicate arrival points for destinations that may be difficult to locate or do not currently have adequate signage.

At key gathering points,´siska function much like a directory at a shopping center and provide options for multiple types of information.

Located at key gathering points, generally double-sided and with up to 10 listings, pedestrian scale signs are smaller (not visible from a vehicle) and can direct to second tier destinations, paths, nodes or clusters.

A simple graphic map illustrates the general area. Focus is on 5 minute walk and can include more detailed information than an overview map. The map becomes standard artwork that can be used for print, web and other media.

Departure routes are equally important to arrival. These trailblazer signs provide clear pathways to the nearest roadway from the many destinations within the City of Portsmouth.
VEHICULAR HIGHWAY SIGNAGE: I-95

The wayfinding system should provide a seamless transition from state/federal highways onto City streets.

EXIT ROUTING
The figure on this page demonstrates how the current signs inform drivers to exit for various destinations from the interstate system. Gateways and vehicular signs should be placed at exits to introduce the Portsmouth Wayfinding System. The City’s wayfinding system signs should pick up from there.

TERMINOLOGY
Linking the highway system and the City system can be greatly enhanced through the use of consistent terminology. Utilizing the same nomenclature from the highway onto the City wayfinding signs will build user’s confidence in the system and reduce any potential confusion.

OBSERVATIONS:
The highway signage leading to Downtown Portsmouth from Interstate 95 does provide the necessary and appropriate information. North-bound 95 includes two sets of NH DOT signs informing drivers to depart the highway at Exit 7, as pictured below. South-bound 95 has one sign informing drivers to depart the highway at Exit 7 also, as pictured above left.

Existing NH DOT signage located on I-95 approximately 3/4 mile prior to EXIT 3.

Existing NH DOT signage located on I-95 approximately 1 mile prior to EXIT 3.

Google Map not legible in this area due to glare at time of photos.
OBSERVATIONS:
The highway signage leading to Downtown Portsmouth from Route 16 (and Interstate 95 Exit 3) does provide the necessary and appropriate information to the Portsmouth Traffic Circle.

However, the Portsmouth Traffic Circle does NOT provide a continuation of appropriate information to guide visitors to Downtown Portsmouth or major destinations. The lack of informative signs is probably confusing to visitors, unclear of which route to take, and creates more congestion for an engineered roadway designed to improve traffic flow.

The following page (2.4) illustrates signage recommendations for the Portsmouth Traffic Circle.

Highway signage directing to the tradeport, transportation center, and hospital were reviewed as well. Signage leading to these destinations provide the necessary and appropriate information.
VEHICULAR HIGHWAY SIGNAGE: PORTSMOUTH TRAFFIC CIRCLE

The illustrations on this page demonstrate some potential modifications to the signs at the Portsmouth Traffic Circle.

RECOMMENDATIONS:
1) On the right-hand side of the Circle, where roadways exit to destinations, the signs should indicate the appropriate exit route markers and the City or destination name with a right turn arrow. Currently only route markers are displayed.

2) On the opposite side of the roadway route exit along the perimeter of the Traffic Circle, the signs should indicate the choices for the driver at the next two (exits), with the appropriate route markers, and City or destination name, but with up-left arrows.

Coordinate with NHDOT to update signage at Traffic Circle.

All signs illustrated above are NOT to scale. They have been illustrated larger for LEGIBILITY only.
Gateways vary in scale and complexity based on their location, context, and purpose. Gateways can welcome a visitor or they can simply mark the City’s limits.

The excitement and anticipation a visitor has when arriving can be heightened by a gateway that lets them know they have arrived at a special place.

Gateways provide a landmark and can include signage, lighting, landscaping, architectural elements, and public art.

**PRIMARY GATEWAYS**

Primary gateways are located at the main points of entry.

**SECONDARY GATEWAYS**

Secondary gateways are located along other routes into Portsmouth. These gateways may include similar elements as the primary at a smaller scale.

**DOWNTOWN GATEWAYS**

Downtown gateways are located at arrival points into Downtown Portsmouth. Typically space is limited, so these gateways may need to be designed at a smaller scale, vertical orientation, or attached to street lamp posts.

**TERTIARY GATEWAYS**

These are simple markers on the outskirts of the city designating the city boundaries.

**WATERFRONT GATEWAY**

Simple gateways or markers can be located at the City waterfront to welcome visitors arriving by water. This element should also orient the visitor and provide additional information.

**GARAGE GATEWAYS**

Wayfinding features in the parking garage are excellent opportunities to welcome the visitor who arrives by car, and help orient them to the City.
CITY-WIDE DESTINATIONS

The following is a list of destinations that shall be included on vehicular signage. Terminology presented represents the line length and abbreviations that are recommended to fit on a typical sign panel (width).

**VEHICULAR SIGNAGE**

- Sign Panel Width: 7'-5" (89")
- Character Height: 6"
- Test Typeface: Clearview HWY-2
- Qty. Lines per Listing:
  - Goal = 1
  - Acceptable = 2
- Qty. Characters per Listing:
  - Goal = 20 or less
  - Acceptable = 24 max.

**RECOMMENDATIONS:**
1. Remove “Portsmouth” from destination listings.
   - Example: “Portsmouth City Hall” becomes “City Hall”.
2. Use only commonly recognized abbreviations. Use consistent terminology and abbreviations throughout system.
   - Examples:
     - Avenue = Ave
     - Center = Ctr
     - County = Cty
     - Historic = Hist

EXISTING SIGNAGE EVALUATION

Observations for signage and wayfinding elements in Portsmouth:

1. Vehicular Directional Signage
   • Do not locate vehicular directional signs on left-hand side of roadways, unless absolutely necessary to set-up a left turn for visitors.
   • Signs mounted to existing utility poles caddy-corner to a vehicle stopped at an intersection are difficult to read and create confusion.
   • There are often too many signs which makes it difficult to discern what is vehicular and/or pedestrian information.

2. Vehicular Directional Signage
   • There are often too many signs which makes it difficult to discern what is vehicular and/or pedestrian information because of message size variations.
   • Messages are too long.
   • Signs have improper text size and inconsistent arrow styles.

3. Vehicular Directional Signage
   • Within urban or congested areas, regulatory roadway signs and vehicular directions signs should be located no less than 25 feet apart.
   • In this location the Strawbery Banke and Parking trailblazer could have been combined as one sign and located 25 to 50 feet prior to the street sign.
   • Street signs should have no vehicular signs attached to them. It is ok to include bicycle and pedestrian directional information.

4. Sign Clutter
   • All of the images on this page are examples of Portsmouth sign clutter issues.
   • There are too many sign types applied to this utility pole; the Strawbery Banke sign should not be attached here and should be located on its own pole in the vicinity.
   • Roadway regulatory and street parking information may be combined, but all vehicular directional signs must be separate.

5. Parking Trailblazers
   • It is very difficult to find this sign in the clutter of all others.
   • It is very difficult to understand what type of parking this is; street? lot? or garage?
   • It is very difficult to read the small text on the sign, which describes the cost of parking. The additional information is not necessary at this time.
Vehicular Directional Signage
- No vehicular directional signs should be located across the street from a vehicular stop at an intersection. The sign must be located prior to the intersection so visitors can make an informed decision prior to stopping.
- There are too many messages on sign panel.
- The message copy height appears too small (it's probably 3 inches), where 25 mph roadways now require 4 inch copy (according to MUTCD and FHWA standards).
- Messages are in the wrong order; straight-ahead first, then left, and right turn messages from the top down (according to MUTCD and FHWA standards).

Sign Clutter
- The same issues for the parking sign as described on the previous page (See bullet #3).
- The parking sign should have a right turn arrow.
- The pedestrian bus stop information should not be mounted to vehicular signage. The information is not meant to be read by visitors in their cars.

Roadway Regulatory Signage
- Highway and state route markers can be located on utility poles, but the supporting messages must be the appropriate size and order.
- The South and North message panels must be larger.
- The arrow on the lower Route 1 marker must be on a separate panel, same style arrow as above arrow, and located below the North message panel.
- The series of signs should be positioned at 7 feet from the bottom sign panel, and increased in height.
**MUTCD TECHNICAL CRITERIA**

The Manual on Uniform Traffic Control Devices, or MUTCD defines the standards used by road managers nationwide to install and maintain traffic control devices on all public streets, highways, bikeways, and private roads open to public traffic. The MUTCD is published by the Federal Highway Administration (FHWA) under 23 Code of Federal Regulations (CFR), Part 655, Subpart F.

**VEHICULAR DESIGN REQUIREMENTS**

Section 2D.50 Community Wayfinding Signs describes the following criteria for the Portsmouth community wayfinding guide signs:

- Maximum of 3 listings per sign, with a maximum of 2 lines per attraction listing.
- Color contrast should be at least 70 percent between typeface and background.
- Type size to be 4 inches for signs in urban conditions with speeds of 25 mph or less, and 6 inches for signs on roadways over 30 mph.
- Clearview HWY typeface as approved by MUTCD and FHWA.
- Background and graphics to be CUSTOM Color - Printed High Intensity Prismatic Reflective Vinyl Sheeting, and comply with MUTCD section 2A.3.
- Signs must have a clearance of at least 7 feet off the ground and 36 inches lateral clearance to satisfy the Americans with Disabilities Act requirement.
- Minimum of 100 feet between signs.

General Notes:
The City of Portsmouth, New Hampshire, involved in the signage program shall enter into an agreement with the New Hampshire Department of Transportation (NHDOT) to assume all responsibility in the maintenance and management of the signs within the NHDOT Right-of-Way (ROW).

Numbers correspond to line items in the NHDOT guidelines for Wayfinding Signs along state maintained roads.

- **Message Quantity 25 MPH**
  - Three Destinations Max.
- **Messages Quantity 30 MPH +**
  - Three Destinations Max.
- **Footer**
  - Break-Away or Yielding in Design as detailed in NHDOT Roadway Standard Drawings or as approved by Federal Highway Administration (FHWA).
- **Sign Panel Background**
  - Product: 3M High Intensity Prismatic Reflective Sheeting
  - Background: Custom Color
- **Font for 25 MPH or less**
  - Style: Clearview 2W
  - Color: Standard - White
  - Size: 4"Copy Height
- **Font for 30 MPH or more**
  - Style: Clearview 2W
  - Color: Standard - White
  - Size: 6"Copy Height
- **Arrow**
  - Style: Standard
  - Color: Standard - White
- **Material**
  - Product: 3M High Intensity Prismatic Reflective Sheeting
  - Color: Standard White
  - Background: Custom Color
  - Arrow, Font, Rule Line: Standard White

*MERJE | Environments & Experiences*
Portsmouth is in the unique position of having a number of historic assets with limited onsite parking. In Portsmouth, our goal is to direct visitors to parking facilities first, and then direct them to destinations via public transportation or by foot.

Directing visitors to parking facilities accomplishes two things. First, it allows visitors to find a space quickly in a safe, named facility they will be able to remember and find easily when they are ready to leave. The parking facility will also serve as an orientation point to where they are in the city, and show them how to get to their destination.

Second, it reduces the amount of traffic on Portsmouth’s smaller downtown streets by limiting the amount of visitors looking for on-street parking spaces.

**PARK-ONCE**

A fully integrated parking strategy couple with a comprehensive pedestrian wayfinding system will promote a “PARK-ONCE” attitude, where visitors will find a primary parking facility, lot or space and then walk to multiple destinations. This in turn also supports the sustainable goals of the programming, by efficiently and quickly moving cars into parking.

**RECOMMENDATIONS:**

The diagram at left illustrates the primary and secondary routes into the downtown area, important intersection decision points, and public parking lots and high occupancy on-street parking locations.

Upon approach, visitors should be directed to parking areas through the use of the “P” trailblazing symbol. As a user arrives at a decision point or gets closer to an individual parking facility, direction will be given by specific garage or lot name within the vehicular directional messaging.

Additionally, parking trailblazers will help guide visitors to surface public parking lots, but not to metered street parking. These trailblazers will enhance the entire Downtown parking experience by giving people information about the number of options.

If visitors arrive at the destination before finding parking in either the garage or lots, signage should direct them from the destination to the closest parking.

![Diagram](attachment:image.png)

Install a coordinated parking system with a “PARK-ONCE” attitude, where visitors will use Vehicular Trailblazers to a Branded parking facility, lot or space and using pedestrian Signs and Maps to walk to destinations.
Parking in any urban environment is always challenging. Wayfinding will not solve all parking issues, but can be part of the solution.

**OBSERVATIONS and ISSUES:**

The ParkPortsmouth website is an effort by the City to promote and inform visitors of the public parking available in Downtown Portsmouth. The ParkPortsmouth website is informative and easy to navigate. ParkPortsmouth identifies the following garage and lots:

- Bridge St Lot
- City Hall Lower Lot
- City Hall Upper Lot
- Court St Lot
- Hanover Garage
- Hanover St Lot
- Market St Church Lot
- Memorial Lot
- Parrott Ave Lot
- South Mill Pond Lot
- Vaughan Pond Lot
- Worth Lot

Currently, the City’s parking directional signs are not consistent in presenting a clear path to guide visitors to parking areas. The confusion is lack of information about where signs lead visitors (e.g., to a garage, to lots, or to street parking). Parking signage is not consistent in graphics and color and messaging.

The wayfinding system should be directing to and identifying all public parking garage and lots in a consistent manner.

**PARKING GARAGE / LOT NAMES**

It is easier to locate parking garages and lots if they are named after the street they are located on. Currently, about half of the lots in Portsmouth are named in this manner. We recommend looking at ways to add address reference points to the remaining lot names, to aid in wayfinding and help visitors when they are trying to locate a specific lot.

- Adopt a Public Parking “P” Icon that is consistent in graphics and color, to ensure that all public parking lots and garage are signed to and identified in a uniform manner.
- Parking Lot names should be consistently identified based upon their street location.
RECOMMENDATIONS FOR HIGH HANOVER GARAGE:

1) Currently the garage is identified as the High / Hanover Parking Facility. Rename the garage after the street with the primary entrance. Identify the facility as a Garage, it’s a more accurate and common description.

2) Identify the garage as a Public Parking facility in the messaging. Also add a public parking symbol that is shared throughout the parking signage system.

3) All signage and graphics applied to the garage must utilize the colors, typography and graphic-style in the new Portsmouth Wayfinding and Signage System.

4) Add wayfinding to the interior of the garage at the elevator banks and garage exits. (See Section 2.19)

Illustrated to the left are a few proposed changes to the Hanover Garage that will help first-time and repeat visitors confidently choose to park in the garage, and trust the new parking system.

PROJECT 1
Improvements to exterior of garage (as illustrated to the left).

PROJECT 2
Improvements to interior of garage (see sheet 2.19)
Portsmouth, NH – Wayfinding and Programming Analysis | April 2014

2.18

ELECTRONIC GUIDANCE SIGN PROGRAM

Dynamic variable message signs (VMS) are continuously updated, communicating to motorists the quickest and easiest route to the closest and most appropriate vacant space. The information can also help the City of Portsmouth collect data, monitor occupancy, and help with traffic congestion.

An electronic guidance system is a networked and integrated software solution that is able to manage all parking areas from a single source and connect to other intelligent traffic management systems, traffic cameras and transportation tools. The data gathered by the electronic systems can be distributed across websites and mobile applications so that visitors receive parking information prior to arrival in Portsmouth.

Benefits

- Visitors would benefit greatly from knowing whether the garage is full in advance of their arrival. It would aid them in their decision about which parking area to head to.
- Dynamic variable message signs would also be helpful with the many special events that take place in Portsmouth.

Challenges

- Dynamic variable message signs are a very expensive addition to any wayfinding program and require a dedicated party to maintain and update the information feed. Aesthetically, these sort of signs may not often feel at home in a historic setting such as Portsmouth.

Communities where electronic messaging has been implemented have reported:

- Time to park was cut in HALF
- 3-5% increase in visits
- 5% increase in facilities attendance and positive PR
- 8% increase of utilization during peak times
- 3% increase in parking space capacity
- 56% reduction in vehicle carbon emissions
- 1-3% decrease in operating costs

The city of Annapolis, San Diego and Austin are considering real-time parking systems.

The City should continue to investigate the use of real-time parking information along with the operational and financial feasibility of such a system. If implemented, the design of the structures and the accompanying graphics should remain consistent with the look of the Portsmouth Wayfinding and Signage design intent.
PUBLIC PARKING
GATEWAY OPPORTUNITIES

GARAGE GATEWAYS
The public parking garage in Downtown Portsmouth is a gateway to the city for the visitor arriving by car. The elevator banks and garage exits are the first thing a visitor passes on their way to their destination. There are opportunities in the garage for large murals and welcoming messages and potential for providing additional information via kiosks, maps or signage.

PARKING LOT GATEWAYS
The public parking lots in Downtown Portsmouth are also a gateway to the city for visitors arriving by car. Exits adjacent to city sidewalks are the first thing visitors pass on their way to their destination. These are opportunities for kiosks or maps providing orientation, or additional information.

These elements can highlight:
• The History of Portsmouth
• Information Centers
• Portsmouth Attractions - Market Square, Albacore Park, Strawberry Banke Museum, and the historic homes and tours.
• The public transit systems.
• Connections to Pease International Tradeport
• Shopping areas
• adjacent neighborhoods
• Surrounding communities, regional context.

Orientation Maps - Fredericksburg, TX
Existing conditions in Bridge St Parking Lot

Interior improvements to Hanover garage; i.e. large murals, welcoming messages, orientation maps, etc.
Opportunities for orientation and information improvements at parking lots.
One potential wayfinding tool used in communities like Portsmouth with limited space for additional signage, are wall murals. These can create a striking impact and can dramatically transform a space, as well as inform visitors.

Most murals are painted directly on a wall surface. Some wall paintings are painted on large canvases, which are then attached to the wall.

Illustrated to the left are a few proposed additions to existing walls in the Downtown area that could help first-time and repeat visitors confidently locate the parking garage. The proposed additions would be supplements to the wayfinding directional signs.

Consider opportunities for wall murals directing to parking.
COAST provides year round public bus and trolley service in the Seacoast New Hampshire region. The Portsmouth Trolleys have two routes, 40 and 41, providing frequent service through Downtown Portsmouth, connecting the Mall, Pease Tradeport, Transportation Center, Lafayette Plaza, and other jobs, retail and housing stops in the region.

The Wildcat Transit Connector provides a loop-route from the University of New Hampshire to Downtown Portsmouth and shares a couple of key stops with COAST.
RECOMMENDATIONS:

1) Explore ways to reduce sign clutter by combining Transit information with the City’s new pedestrian wayfinding signage.

2) Where those Transit stops share information with the City wayfinding signage, it is recommended a map is added with a “You-Are-Here” star and nearby attractions, possibly with distances to those attractions.

3) There is also opportunity for marketing and wayfinding efforts on the COAST Trolley itself, both on the interior and exterior. The trolley connects four districts/neighborhoods (Downtown, West End, South End, and Pease International Tradeport). Consider utilizing the trolley as a information hub for those areas. The districts/neighborhoods could be placed on the COAST map, and information about those districts/neighborhoods could be displayed inside or on the exterior of the trolley.

4) The COAST and Wildcat Transit could also be better promoted on various City websites.

---

Design and install pedestrian maps to co-exist with Transit information near key Pedestrian Stops within the Downtown.
In the downtown and neighboring areas, Portsmouth is a very walkable city. Major attractions are clustered together, and the streets linking those areas are lined with shopping, dining and art galleries that invite a pedestrian to linger on the way to their destination. The one-way streets and narrow roadways that can make driving in Downtown Portsmouth a challenge, make it more appealing for pedestrians. For this reason, the majority of signage and wayfinding information should be presented at the pedestrian level. There are several pedestrian arrival points where wayfinding information will be available.

**ARRIVAL POINTS**

Pedestrians can arrive in Portsmouth in a number of ways and each provides unique conditions and requirements. In all cases, these arrival points should provide: identification, orientation, directional, real-time data, and general information. Types of pedestrian arrival points include:

- **NATURAL PEDESTRIAN ARRIVAL:** Simply walking into Downtown from an adjacent neighborhood, across a bridge, or from a recreational trail.
- **AUTO > PEDESTRIAN TRANSITION:** Parking garage and parking lots.
- **PUBLIC TRANSPORTATION > PEDESTRIAN TRANSITION:** Opportunities at COAST and Wildcat Transit stops for pedestrian information and maps.
- **BICYCLE > PEDESTRIAN TRANSITION:** Information can be provided at bike racks, bike trailheads, and at bike shops or rental locations.
- **WATER > PEDESTRIAN TRANSITION:** Information can be provided at the appropriate City docks.

Coordinate with the City of Portsmouth renovation and upgrade initiatives for the Hanover Garage interior gateway elements. (reference sheet 2.19)

Identify pedestrian gateway entrance locations from the City dock’s, and waterways. Determine and design appropriate pedestrian-type signage.

Provide information at bike racks, bike trailheads, and at bike shops or rental locations.
The diagram illustrates the potential pedestrian circulation routes in the Downtown. A circulation plan like this can help guide locations for pedestrian directional signs and informational kiosks. The pedestrian wayfinding program for Portsmouth may include a variety of components, including different sizes and styles of directional signs and information kiosks. The primary function of the directional signs will be to help connect pedestrians from parking areas to the major destinations along a preferred pedestrian network.

GUIDING THE PEDESTRIAN OPPORTUNITIES:
- Identify key nodes where important information can be communicated
- Use natural landmarks to provide orientation
- Use existing infrastructure (e.g. light poles) as mounting devices
- Incorporate inlaid sidewalk elements, or pavement markings
- Incorporate technology to provide more detailed information where necessary

CHALLENGES:
- ADA Clearance and Mobility Issues
- Lack of sidewalk infrastructure
- Gaps in pedestrian infrastructure
- Safety Issues
- Areas of auto and bicycle conflict
- Unfriendly pedestrian intersections

TYPES OF PEDESTRIAN INFORMATION:
- Orientation
- Directional
- Informational
- Events and Promotions
- Real-Time Data (Public Transit, Community, etc.)

TYPES OF PEDESTRIAN WAYFINDING TOOLS:
- Orientation Maps
- Directional Signs
- Technology Elements
- Community Boards
- Landmarks / Public Art

Note: Review of individual site requirements (i.e. ADA clearances, sidewalk conditions, etc.) will be accomplished during the programming phase of this project, when exact placement for wayfinding elements are analyzed and chosen. The scope of this plan does not include a physical inventory of every existing pedestrian site condition in Portsmouth, but more of a identification of general opportunities, obstacles and best practices that can be used when determining the wayfinding tools information and placement.

Install Information Kiosks (static) at key visitor gathering areas. Kiosks would include maps, interpretive information and mobile technology - such as QR codes or text messages.

Install Pedestrian Signage including maps and directional signs.
BIKE ROUTE WAYFINDING
A bicycle wayfinding system consists of signing and pavement markings to guide bicyclists to their destinations along preferred bicycle routes. Signs are typically placed at decision points along bicycle routes—typically at the intersection of two or more bikeways and at other key locations leading to and along bicycle routes.

TYPES OF SIGNS
There are three general types of wayfinding signs: Confirmation signs, Turn signs, and Decision signs.

CONFIRMATION SIGNS
These signs indicate to bicyclists that they are on a designated bikeway. They also help make motorists aware of the bicycle route. Signs include distance and time, but do not include arrows. Placement occurs about every 2 to 3 blocks along bicycle routes.

TURN SIGNS
Turn signs indicate where a bikeway turns from one street onto another street. They can also be accompanied by pavement markings. These signs include destinations and arrows. Placement occurs on the near-side of intersections where bike routes turn, i.e., where the street ceases to be a bicycle route or does not go through.

DECISION SIGNS
These signs mark the junction of two or more bikeways and inform bicyclists of the designated bike route to access key destinations. These signs include destinations and arrows. Distances, and travel times are optional but recommended. Placement occurs on the near-side of intersections in advance of a junction with another bicycle route and along a route to indicate a nearby destination.

TYPES OF DESTINATIONS
Wayfinding signs can direct users to a number of different types of destinations, including the following:
- On-street bikeways
- Commercial Centers
- Public Transit Centers and Stations
- Civic/Community destinations
- Local or regional parks and trails
- Hospitals
- Bridges

Include design standards for bike route wayfinding in the City’s wayfinding system.
DEPARTURE ROUTES

The map illustrates the various potential departure routes for visitors from Downtown Portsmouth.

Departure routes are equally as important as arrival routes and when possible they should be the same.

This is not always the case because of one-way streets, no left turns, and other traffic regulatory issues. Any additional interstate trailblazer signs should be coordinated through the New Hampshire Department of Transportation (NH DOT).

Supplement existing signage, and fill in gaps for major departure routes.

Supplement existing signage, and fill in gaps for major departure routes.
A successful wayfinding program includes a variety of tools and presents information in different forms. Orientation maps, whether they are printed in a brochure, displayed on signage, or provided in a digital format, are a common wayfinding tool. The use of consistent terminology and display of map artwork across a range of mediums builds trust in the program and gives the user confidence that the information being presented is accurate and up-to-date.

In Portsmouth there are a variety of maps provided by different organizations, each with their own graphic language and purpose. The base information included on these maps is not necessarily consistent including boundaries, landmark references, street labels and destination names and locations.

As with many cities, Portsmouth is constantly evolving; the accuracy of maps and updating the information is a common issue. The City has a wealth of local map data and a skilled Geographic Information Systems (GIS) staff that could provided up-to-date city base maps. A single source base map can then help control the consistency within the system and provide guidelines to third-party vendors and partners. This will also help in maintaining the information over time for changes or new maps that need to be created.

The City can then centralize, share and disperse consistent and accurate information to its visitors and partners. It is recommended that the City establish an administrative process for the management of the map system information along with a communications plan to inform the various partners and third party vendors of the availability of the map artwork.

**BASE MAP DESIGN CONSIDERATIONS:**

- Signs with maps should typically be located at key gathering areas and along paths of pedestrian travel.
- All static mapping on signs shall be “heads-up” oriented and include a “you are here” indicator.
- Maps should be created in formats that easily allow consistent translation across a variety of wayfinding tools and visual requirements.

Typical map formats include:

- Brochures (printed/paper)
- Kiosks (static–printed/dHPL)
- Kiosks (static–illuminated/dHPL)
- Signage (static–printed/dHPL)
- Websites (computer screens)
- Hand-held device (interactive)
- Video Screens (interactive)
- Bus stops (vinyl graphics)
- Wall Murals (vinyl graphics)

Create a new orientation basemap to be used on websites, tourism App, in brochures, and for kiosks and orientation signage.
Locate a kiosk on the waterfront; either Prescott Park docks, or the Harbor and Tugboat cruise area.

Identify pilot areas and install various hub elements. Areas to consider include: Parking Garage and Lots and Visitor Centers.

**INFORMATION HUBS**

**INTERACTIVE STATION**
Contains downloadable content, internet access, reservation making capability, printable information, shopping and dining, etc.

**POSSIBLE LOCATIONS:**
- Downtown
- City Dock
- Visitor Centers
- Civic/Community

**INFORMATION KIOSK**
Contains orientation map, directional information, text messaging/internet links, interpretive information, shopping and dining, etc.

**POSSIBLE LOCATIONS:**
- City Dock
- Visitor Centers
- Shopping Streets
- Parking Garage and Lots
- Civic/Community

**MANNED KIOSK**
Professional greeter provides personal contact and info, printable information, brochures, maps, shopping and dining, etc.

**POSSIBLE LOCATIONS:**
- Market Square Kiosk
- Parking Garages

**INFORMATION PANEL**
Contains text messaging/internet links, interpretive information, destination information and advertising

**POSSIBLE LOCATIONS:**
To be determined
The Wayfinding System for the City of Portsmouth is designed to serve the needs of all travelers. Level 1 of the system is focused on the motorist and is City-wide in scope. Level 2 is focused on pedestrians, primarily within the Downtown area.

Because a Wayfinding and Signage System's effectiveness is dependent on clarity and simplicity of messaging, guidance on which destinations to include in the system is critical.

Provided below is a two-step process for determining whether or not a particular destination should be included within the City of Portsmouth Wayfinding System. Individual destinations falling to be eligible under Step 1 will not be considered for inclusion. Destinations MUST qualify under both Steps 1 and 2 to be listed on associated wayfinding system signage.

STEP 1: ELIGIBLE CATEGORIES

Destinations must fall under the following categories and meet the criteria established for this system.

Color Codes Used:

- 
- 
- 

Destination types shown in green are those that currently exist in Portsmouth.

Destination types shown in black are listed in the event that such a facility may locate here in the future.

Destination types shown in red are prohibited from being signed within this system.

Not: Each eligible destination is designated as applicable to a particular level of the Wayfinding System. Level 1 = Motorist signage; Level 2 = Pedestrian signage.

COMMERCIAL ATTRACTIONS

Arboreta and Botanical Gardens: A place where a wide variety of live plants are cultivated for scientific, educational, and ornamental purposes, often including a library, a herbarium, greenhouses, laboratory spaces, and open grounds. These are facilities with a reasonable guarantee of permanence, and where adequate labeling of plants is common and proper documentation of the collection takes place. Must have facilities that are open to the general public.

Permitted: Level 1 & 2

Brewery: A licensed site which shall be open to the general public for tours, tasting and sales, a minimum of 1,500 hours per year, and provide an educational format for informing visitors about beer and beer processing.

Permitted: Level 1 & 2

Unique Natural Areas: A naturally occurring area or site of interest to the general public. May include water features or special geologic formations.

Permitted: Level 1

Commercial Park: A group of commercial manufacturing facilities, at least 25 acres in size, recognized and signed as a commerce park by the local authorities.

Permitted: Level 1

Indoor Entertainment Facility: A unique permanent indoor entertainment facility of at least 75,000 sq. ft. The facility shall include multiple devices for entertainment and an educational or museum component.

Permitted: Level 1

Roadside Farm Markets: A stationary retail sales establishment operated by one or more farmers for the purpose of selling farm and food products directly to consumers. Operations by which the consumer harvests their own farm or food products shall be considered roadside farm markets.

Such facilities are not eligible for signage under this system.

Winery: A licensed site, which produces a maximum of 200,000 gallons of wine per year. Sites shall maintain a minimum of 3,000 vines or 5 acres of vineyard; be open to the general public for tours tasting and sales, a minimum of 1,500 hours per year, and provide an educational format for informing visitors about wine and wine processing.

Permitted: Level 1

Zoos, Zoological Gardens, Animal Parks and Aquariums: A place where animals, reptiles or fish are kept, often-in-combination with indoors and outdoors spaces. Must have facilities, which are open to the general public.

Permitted: Level 1 & 2

COMMUNITY DESTINATIONS

Business Districts: An area which is officially designated as a business district by local officials.

Permitted: Level 1 & 2

Courthouses/Government Buildings: A public building, structure or complex used by a federal, county, state or municipal government for the purpose of convening official legal activities and that is open to the public.

Permitted: Level 1 & 2

Military Bases: A facility operated by the State or Federal government for training or support of military troops or for inventorying and warehousing military equipment.

Permitted: Level 1

Shophouses - Regional: A group of 30 or more shops, retail stores, and/or restaurants with at least one major department store functioning as an anchor. Such centers are under the ownership of one landlord exercising unified control over the premises or center. The goods or services shall be readily available to shoppers without the need for scheduling appointments or return trips. Ample parking according to the City's Zoning Code must also accompany such a destination.

Such facilities are not eligible for signage under this system.

Shophouses - Strip: A group of 5 or more shops, retail stores, and/or restaurants usually constructed along a major arterial or other heavily traveled road.

Such facilities are not eligible for signage under this system.

Shophouses - Neighborhood: A group of 15 or more shops, retail stores, or restaurants usually concentrated within a neighborhood, often at a corner, that functions as the node or nucleus of the neighborhood(s) surrounding its location.

Such facilities are not eligible for signage under this system.

Shophouses - Districts: A group of 30 or more shops, retail stores, or restaurants usually grouped along a street or within a neighborhood typically spanning two or more contiguous blocks.

Permitted: Level 1 & 2

CULTURAL / INSTITUTIONAL ATTRACTIONS

Arenas: Includes stadiums, auditoriums and civic or convention centers.

Permitted: Level 1 & 2

Art Studios: A permanent working artist studio of at least 2,500 square ft., offering artistic demonstrations that bring visitors to the facility. The facility must offer at least three art-based activities, eligible activities include, demonstrations of specialty techniques, tours, free educational lectures. The art studio shall be open to the public and readily available to tourists, without the need for scheduling appointments or return trips. The studio must meet all safety and maximum occupancy requirements.

Permitted: Level 1 & 2

Churches: A building used for public worship or spiritual gatherings of its visitors.

Such facilities are not eligible for signage under this system.

College or University: An educational institution that is nationally accredited and grants degrees.

Permitted: Level 1 & 2

Courthouses/Government Buildings: A public building, structure, or complex used by a federal, county, state or municipal government for the purpose of convening official legal activities.

Permitted: Level 1 & 2

Portsmouth, NH – Wayfinding and Programming Analysis | April 2014
SAMPLE CRITERIA FOR INCLUSION

**Health Center:** A health care center operated by a government entity that is open to the public.
Permitted: Level 1 & 2

**Libraries:** A repository for literary and artistic materials, such as books, periodicals, newspapers, recordings, films, and electronic media, kept and systemically arranged for use and reference. Operated either by the City, County, or by a non-profit organization. Video outlets (i.e. Blockbusters, Hollywood Video, etc.) do not qualify under this definition.
Permitted: Level 1 & 2

**Museums:** A facility in which works of artistic, historical, or scientific value are cared for and exhibited to the general public.
Permitted: Level 1 & 2

**Religious Site:** A shrine, groto or similar type site, which is of a unique religious nature.
The facility must have a minimum average of 50 visitors per day on the busiest day of the week.
Such facilities are not eligible for signage under this system.

**Schools - Elementary:** An institution for the instruction of children or people under middle-school age. Regular public, military, or charter school facilities are not eligible for signage under this system.
Such facilities are not eligible for signage under this system.

**Schools - Middle/Junior & Senior High Schools:** An institution for the instruction of children or people beyond elementary grades and under college age. A middle/junior or senior high school must provide an outdoor athletic field or swimming facility or other indoor athletic facility routinely visited by teams from outside the county to qualify for signage along a major arterial road under this system. The school must otherwise meet NHDOT requirements for signage to be included under this system.
Such facilities are not eligible for signage under this system.

**Specialized Schools:** Any facility for the performing arts, exhibits, or concerts, which meets the age criteria for Middle/Junior and/or Senior High Schools (as defined above) and that has a minimum occupancy capacity of 200 people that is open to the public. The school must otherwise meet NHDOT requirements for signage to be included under this system.
Such facilities are not eligible for signage under this system.

**Theatres, Performing Arts, and Concert Halls:** Any not-for-profit facility used for the public’s enjoyment of the performing arts that has a minimum occupancy capacity of 200 people and associated parking.
Permitted: Level 1 & 2

**HISTORICAL / ARCHITECTURAL**

**Historic Site:** A structure or place of historical, archaeological or architectural significance listed on or eligible for listing on the National or State Register of Historic Places or otherwise designated by the NH Division of Historical Resources (DHR). The site must be accessible to the general public and provide a place where visitors can obtain information about the historic site.
Permitted: Level 1 & 2

**Historic District:** A district or zone listed on or eligible for listing on the National Register of Historic Places or otherwise designated by the NH DHR. Historic districts shall provide the general public with a single, central location such as a self-service kiosk or welcome center where visitors can obtain information concerning the historic district.
Permitted: Level 1 & 2

**RECREATIONAL**

**Beaches, Piers & Waterfronts:** Areas with access to and views of significant waterways, which are recognized by the City as having significant recreational or cultural value and are open to the public a minimum of 180 days per calendar year.
Permitted: Level 1 & 2

**Boat Launch:** A public facility for the docking or launching of boats.
Permitted: Level 1 & 2

**Canoeing and Kayaking:** Public areas with established canoeing or kayaking facilities. Individual private attractions are not eligible for signage.
Permitted: Level 1 & 2

**Golf Courses:** A facility open to the public and offering at least nine (9) holes of play. Miniature golf courses, driving ranges, chip and putt courses, and indoor golf shall not be eligible.
Permitted: Level 1

**Hiking and Biking Trails/ Routes:** Areas designated for recreational hiking, biking, walking, etc. which are publicly accessible, and owned and maintained by either the City, State, Federal Government, or non-profit organizations. Signs will only be installed at locations that direct to an established trailhead with parking facilities.
Permitted: Level 1 & 2

**Marina:** A public facility for the docking of boats, as well as embarking and disembarking from watercraft. Parking for motor vehicles must be located nearby.
Permitted: Level 1 & 2

**Parks – National, State, Regional and Forests:** An area so designated and under the jurisdiction of the state or federal, or non-profit organization with facilities open to the general public.
Permitted: Level 1 & 2

**Parks – City:** An area so designated and under the jurisdiction of the City with facilities open to the general public and with enough amenities that its appeal is broader than a particular neighborhood or singular district. Required amenities include a restroom and public parking.
Permitted: Level 1 & 2

**Parks – Neighborhood:** An area so designated and under the jurisdiction of the City with facilities open to the general public and with amenities that its focus is on a particular neighborhood or singular district.
Such facilities are not eligible for signage under this system.

**Sports Facilities:** Regional (multi-jurisdictional) facilities such as minor league and little league baseball fields and school recreational fields.
Permitted: Level 1

**Water Recreational:** Areas designated for water skiing, wake boarding, jet skiing, or motorboats.
Permitted: Level 1

**Private Recreational facilities:** Recreational facilities that are owned and maintained by a private entity but open to a community of over 20,000 members/property owners can be included in the system, if the facility accepts walk-in guests from nonresidents and nonmembers. Facilities must comply with other requirements of this section.
Permitted: Level 1 & 2

**TOURIST SERVICES**

**Bed and Breakfast Establishments/Boarding Houses:** A private residence located that contains ten (10) or fewer bedrooms used for providing overnight accommodations to the public, and which breakfast is the only meal served and is included in the charge for the room.
Such facilities are not eligible for signage under this system.

**Hotels & Motels:** A facility with at least 75 rooms for lodging.
Such facilities are not eligible for signage under this system.

**Restaurants:** An establishment where food and drink are prepared, served and consumed on premise and provided by waiter service. This category includes drive-through or franchised sit-down service.
Such facilities are not eligible for signage under this system.

**Visitor Information Centers:** A facility where the primary purpose of its operation is to provide information and tourist supportive services. Adequate parking must be provided to support such center.
Permitted: Level 1 & 2
TRANSPORTATION

Airports: A public use facility licensed by the NHDOT for landing and takeoff of aircraft, and for receiving and discharging passengers and cargo. Permitted: Level 1 (Campus signage is the responsibility of the destination.)

Heritage Roads, Historic Routes and Trails: A road, trail, or route designated by NHDOT, United States Department of the Interior, or other Federal agency as being part of a national or state recognized historic or heritage park/trail system. Permitted: Level 1 & 2
STEP 2: CRITERIA RANKING TEST

The criteria ranking test’s purpose is to determine whether or not a particular destination qualifies for listing within the City’s Wayfinding System. To determine the destination’s qualification it must be ranked using the objective criteria outlined below.

If a destination has passed the test for Step 1, then it qualifies for being examined under Step 2: the Criteria Ranking Test.

A minimum score of 55 is needed to be signed as a destination as a part of the City of Portsmouth Wayfinding and Signage Project.

1. SIZE OF ATTRACTION

An attraction should report the total number of full time employees or full time equivalent for part-time employees, during the attraction’s peak season. For example, an employee who works 50 percent of a normal full-time employee should be counted as .5. Non-profit attractions can count volunteer staff, using the same method of equivalent calculation.

Number of Full-Time Employee Equivalents

SCORE ___

2. ADEQUATE ROAD SYSTEM

- Paved Access Road/Entrance with clearly visible entrance signing: 10
- Unpaved Access/Road Entrance with clearly visible entrance signing within 200 feet of entrance: 5
- Unclear Entrance with sign not clearly visible within 200 feet of entrance: 0

SCORE ___

3. ADEQUATE PARKING FACILITIES

- Sufficient parking based on the Institute of Transportation Engineers Standards for Parking Generation, 2004 for the acceptable ratio of attraction attendance capacity and parking spaces on a paved area: 15
- Sufficient parking based on the Institute of Transportation Engineers Standards for Parking Generation, 2004 for the acceptable ratio of attraction attendance capacity and parking spaces on an unpaved area: 10
- Only legal on-street parking or off street parking in public lots or garages within ¼ mile of the attraction: 10
- Insufficient parking on attraction property based on the Institute of Transportation Engineers Standards for Parking Generation, 2004, for the acceptable ratio of attraction attendance capacity and parking spaces: 5
- No parking: 0

SCORE ___

4. SEASONAL OPERATION

- Open 12 months per year: 20
- Open at least 6 months per year: 15
- Open less than 6 months per year: 5

SCORE ___

5. HOURS OF OPERATION

- Open 56 or more hours per week: 20
- Open between 40 and 56 hours per week: 10
- Open less than 40 hours per week: 5

SCORE ___

6. ATTRACTION OF REGIONAL SIGNIFICANCE AS IDENTIFIED BY STAKEHOLDERS/CITY

- National Recognition: 20
- Regional Recognition: 10
- Local Recognition: 5

SCORE ___

The minimum score to qualify is 55. GRAND TOTAL ___
### MANAGEMENT AND MAINTENANCE

#### Sign Longevity

</tbody>
</table>
After approval of a sign design, the City of Portsmouth will seek approval for sign routes, final sign locations, and an ongoing maintenance and management plan. With the approval of these standards the City will have approval for the full installation of signs.

**MANAGEMENT**

Management
The establishment of a governing body that oversees the funding, maintenance and expansion. A project manager must be assigned the responsibility of the day to day management of the system.

Maintenance Funding and Contracts
Maintenance should be a shared responsibility between the City and the programs Stakeholders.

Average annual maintenance budget is 10% - 15% of the total project construction cost.
Wayfinding programs can offer the opportunity to reduce the negative impacts that the built environment and transportation can have on our planet.

Wayfinding can have a positive effect on our environment.

Promote Multi-Modal Transportation
Wayfinding programs promote the use of alternative transportation methods by communicating information that encourages the use of bicycle paths, pedestrian walkways and public transportation. Wayfinding programs help to support the use of these transportation means by making them accessible, user-friendly and promoting their availability.

Efficiency in Transportation
In an effort to reduce traffic, wayfinding programs help people find their way quickly and efficiently to their desired destination, whether it is a major attraction or a hard to find parking garage. Less time traveled equals less time searching which reduces the carbon footprint left by the vehicle.

MATERIALS AND PROCESSES
The design of the wayfinding program shall meet our modern needs and preserve to the greatest degree possible the finite resources of our planet. The wayfinding program may consider a variety of “green” materials and processes, as well as administrative efforts that promote “local” inclusion.

Solar Power
Solar panels can provide power to the illuminated signs such as gateways and information kiosks. In Tampa, solar-powered kiosk units consume only 2.05 kilowatt-hours (KWh) per month at a cost of 20 cents – in comparison to $72 per month if the units were powered with tradition fluorescents.

Green Materials / Reflective Sheeting
The manufacturing process for 3M High Intensity Reflective Vinyl, reduces VOC emissions by 97 percent and energy consumption by 72 percent, compared to the standard engineer grade vinyl sheeting products typically used in the past.

Local Construction
Some municipalities are awarding extra points to local qualified fabricators during the bid process to help keep the projects local and reduce the need for shipping large portions of the project across the country as well as supporting local businesses.

Some clients are “buying local” by engaging community artisans, who can produce finials and other sign components locally. These local initiatives also support the local economy.
MEASUREMENTS

LONG-TERM MEASUREMENTS
Upon a substantial completion of the wayfinding system, follow-up customer satisfaction information can be gathered. In addition, there is tourism and transportation data that can be analyzed and associated with the wayfinding system. Understanding that wayfinding is a component of an overall strategy, it can be separated into results that may be attributed directly or indirectly to its effectiveness.

Some of this information currently exists and is tracked by either the City, a local association, such as the Visitors Center, or an individual destination.

DIRECT OUTCOMES:
• Visitation at secondary destinations
• Parking lot occupancy rates
• Repeat visitation
• Mobile App downloads
• Visits to the Visitor or City website
• Increase in on-street parking revenue

A series of measurement tools will be put into place to evaluate and analyze the effectiveness of the resulting wayfinding system. This includes improvement in navigation, customer satisfaction, and the economic return on investment.

PRE-PROJECT SURVEYS
Conducted at the Visitor Center, Chamber of Commerce, and other destinations, this survey establishes a baseline for measurement by conducting customer satisfaction surveys, requesting information regarding parking, navigation around downtown, use of technology, and overall experience. An initial phase of this survey was completed during the development of this Wayfinding System and will continue for the next several months (ongoing).

EARLY SUCCESS
Early success can be measured by similar customer satisfaction surveys, post-installation of pilot systems. Surveys can be conducted as early as 2 months after the pilot projects are completed and will continue for 4-6 months. Questions will be tailored to specific destinations and the specific wayfinding elements that have been put into place.

THE DIRECT AND INDIRECT OUTCOME SHALL SUPPORT THE FOLLOWING PROJECT OBJECTIVES:
A. Promote Portsmouth as a friendly, easy-to-navigate environment, with a wide range of outdoor activities.
B. Enhance multi-modal transportation efforts, including auto, bicycle, and pedestrian.
C. Support a Park-Once philosophy.
D. Enhance the pedestrian experience.

INDIRECT / SUPPORT:
• Over-night stays (CVB)
• Hotel occupancy
• Tourism spending (CVB)
• Marina occupancy
• Reduction in traffic congestion
• Retail / Restaurant occupancy rates
